20M+ Families catered

12.8M+ Monthly Visits

COMPETITORS

TARGET AUDIENCE

-  Elder members who want to have purchasing power
-  Patients with chronic and acute illness
-  Regular Medicines and other pharmacy product buyers
-  Hospital or local pharmacy store visitors

KEY SERVICES PROVIDED

Delivering healthcare

Delivering medicines

Providing diagnostic

Wide range of Lab

User Persona

Taran

"The monthly supplies for my parents are about to finish up, how should I send it to them in this covid situation"

40

Bhopal,
M.P.

Works in Pharma
Company

Brief

- He lives in Bhopal with his wife and 2 kids.
- Works in healthcare division and has regular contacts with pharmacy stores and doctors. His parents live independently in a small town near Sagar(M.P).
- Covid has just hit the country and everything is suddenly shut. Used to send them medicines regularly via courier services.
- With everything shut, he is now looking for a way to send them online because it's very risky for them to step out in such a situation.
- Has never used online e-commerce platform for medicines and always goes with physical purchase. Recently saw an ad of PharmEasy and is thinking of trying it out to send medicines

Pain Points

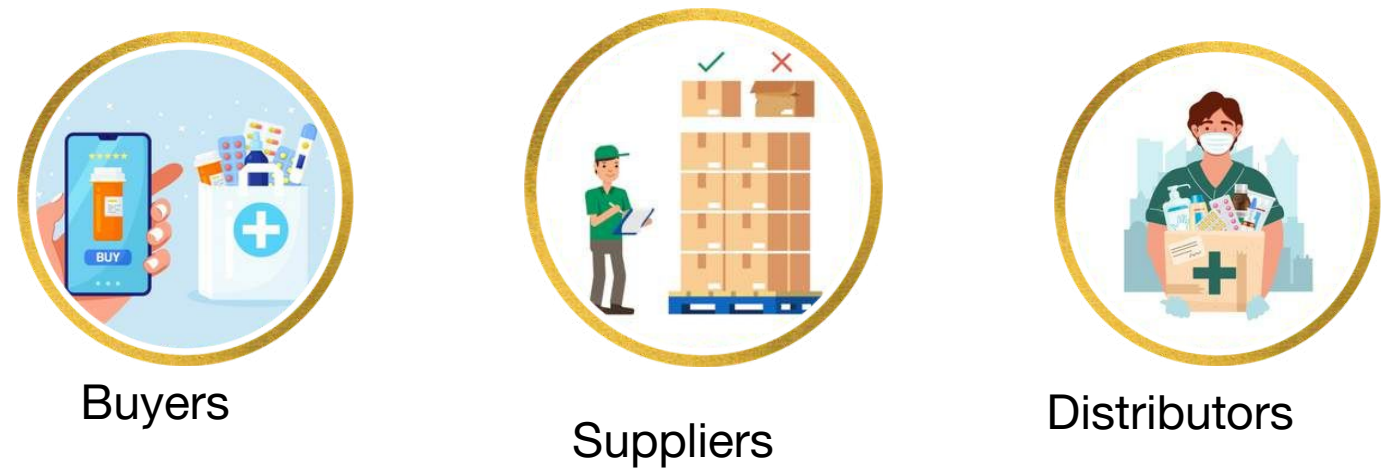

- Is finding hard to step out with the entire covid situation.
- Trust issues and price issues with online pharmacies.
- Is skeptical of the expiry dates of the medicines while ordering medicines.

Needs & Wants

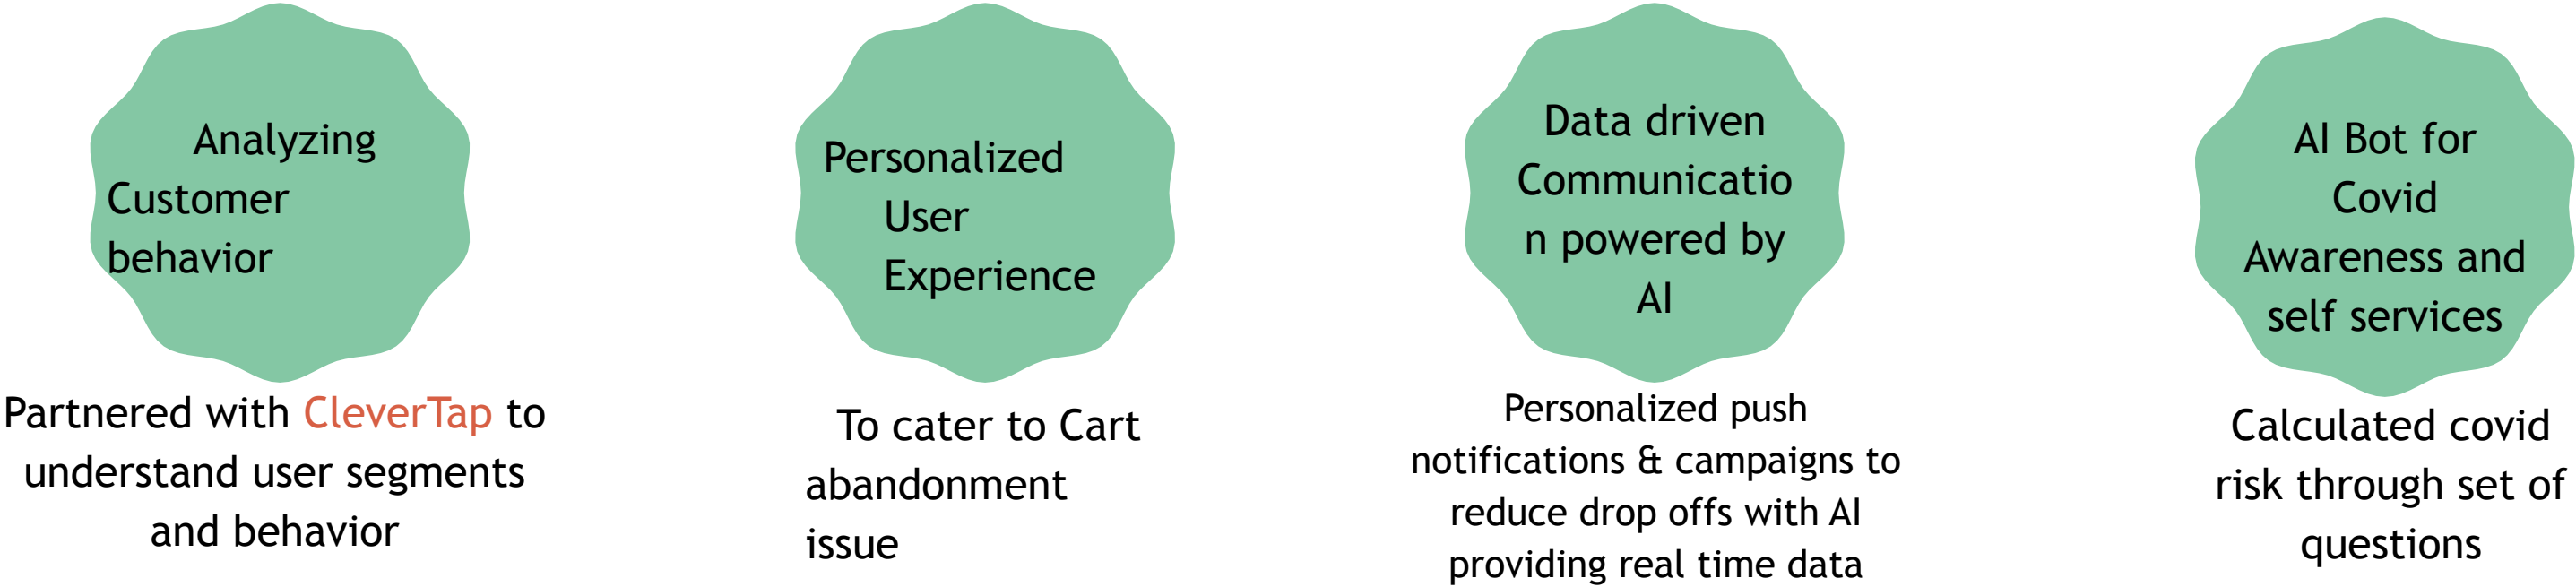

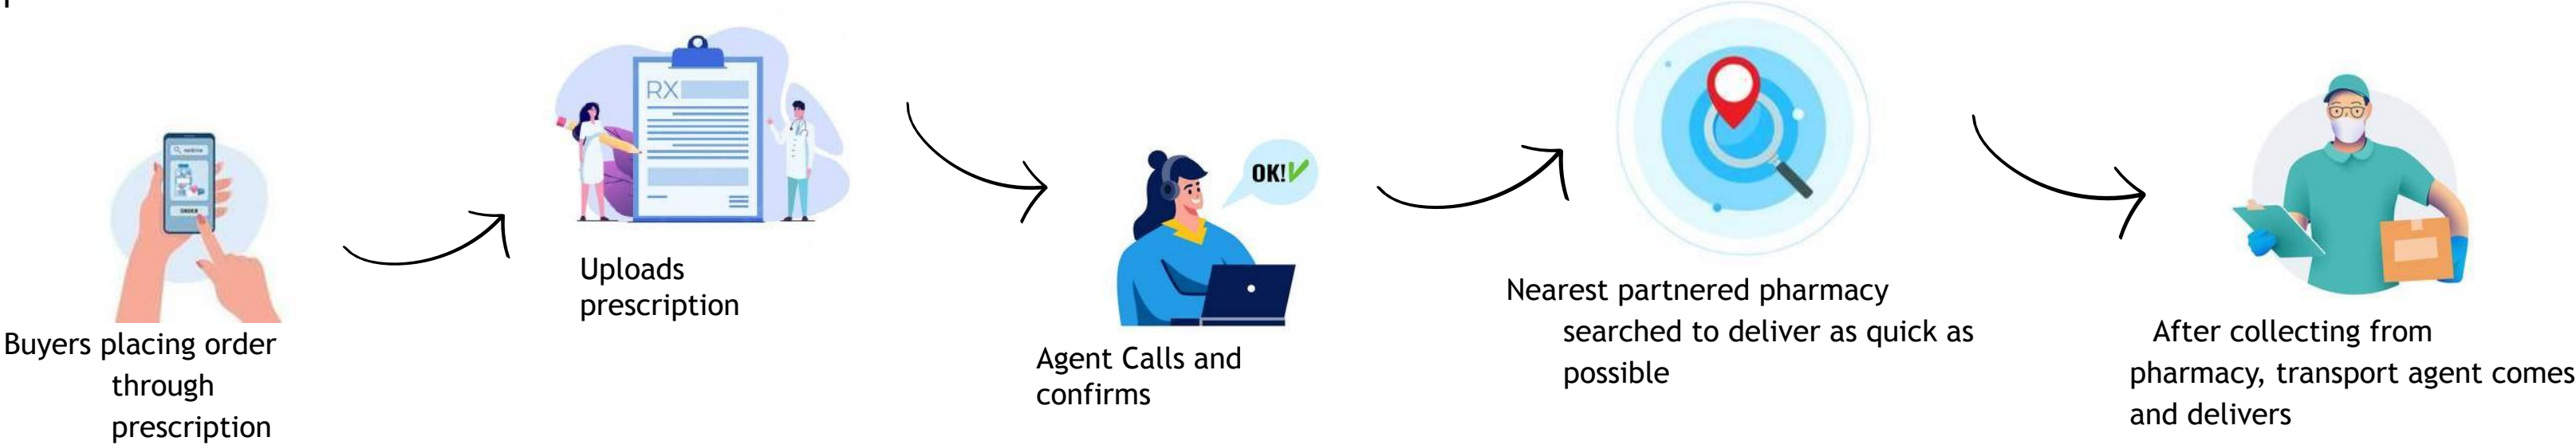

- Wants to get medicines from a trusted source. Wants them at discounted price.
- Wants to continue with the medical checkups and regular tests done for his parents at his doostep given hospitals are not very safe at this point.
- Quick deliveries.

Business Model

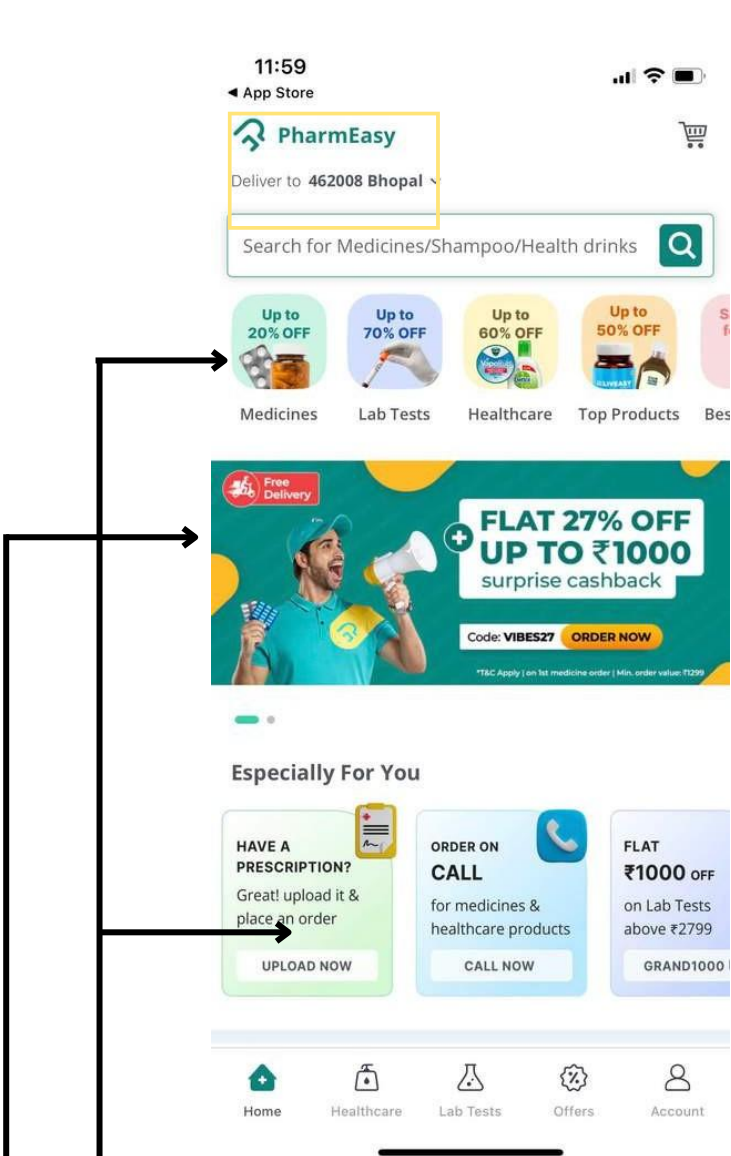

Prescription Model

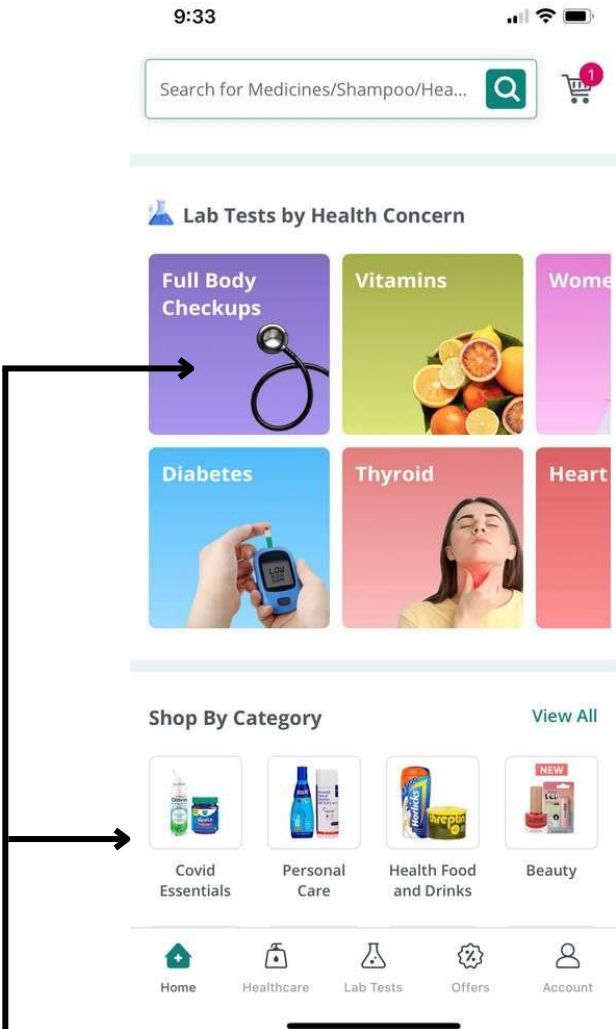

User Journey

Home page

Call-to-action prominent on the Home page with clear separation of offerings on top
Promotional codes and discounts right in front to grab attention

The app clearly follows Hick's Law - breaking into categories and segregating into groups
The another key service, Lab tests with categories right at front to enable easy decision making

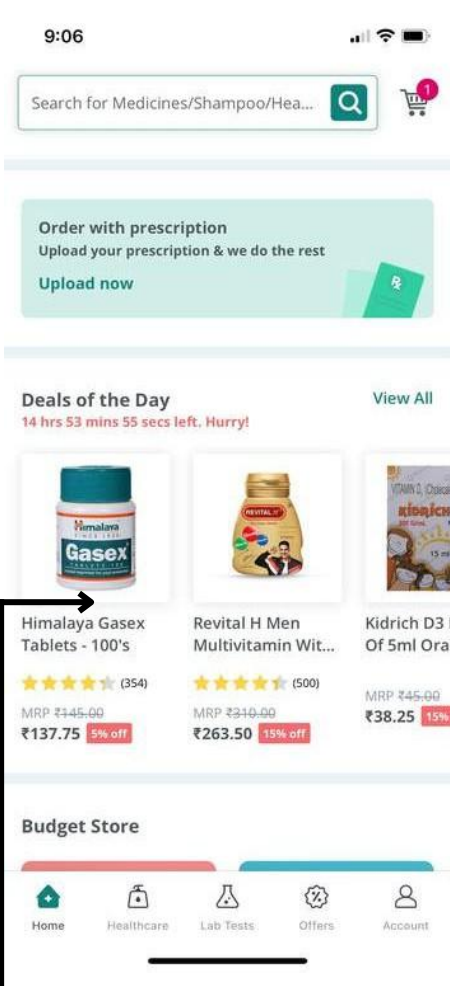

Cashbacks on tests with affordable price range, another way to prompt the user

Discovering home page

Clear display of which page it is and easy navigation
Offers on each page for each service. Frequently booked tests shows popular ones and eases decision making

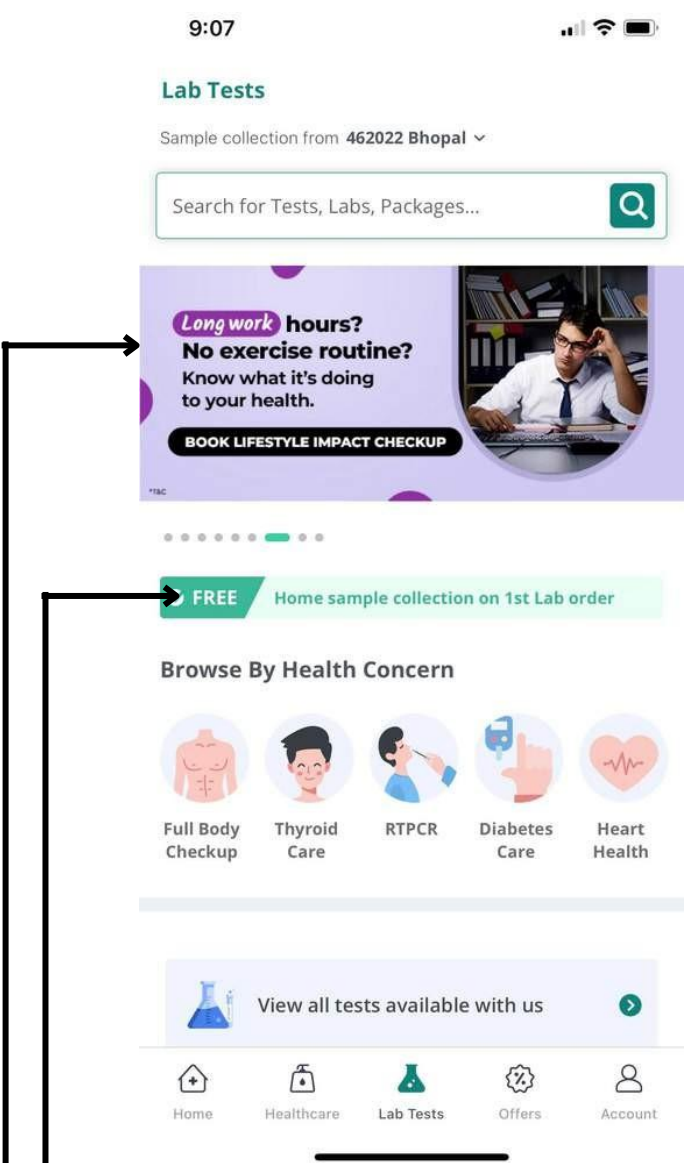

Deals catalogue with familiar pictures and lower prices, prompting for easy purchase

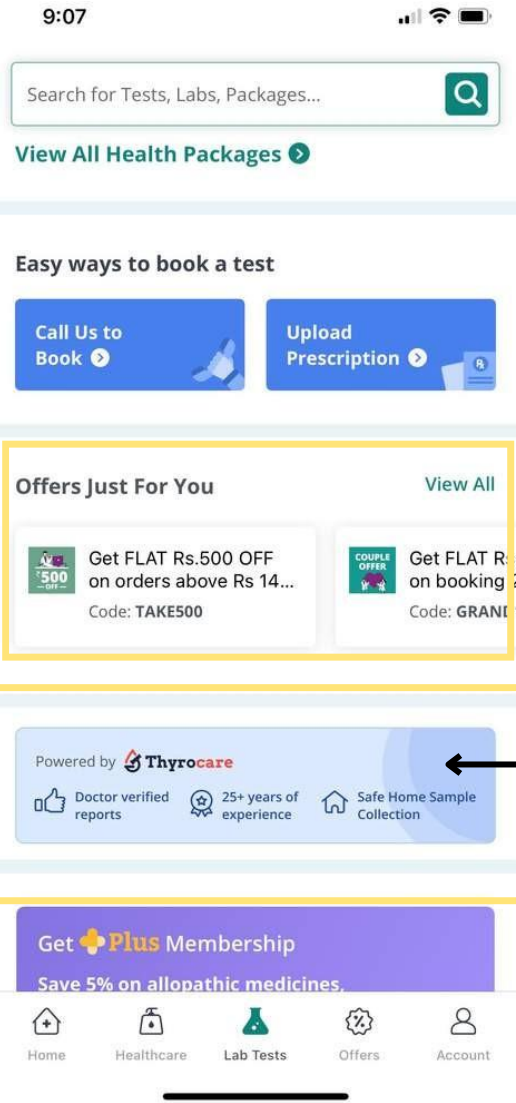

Again, segregation based on deals and prices
Search button being properly visible and accessible throughout

Lab Tests

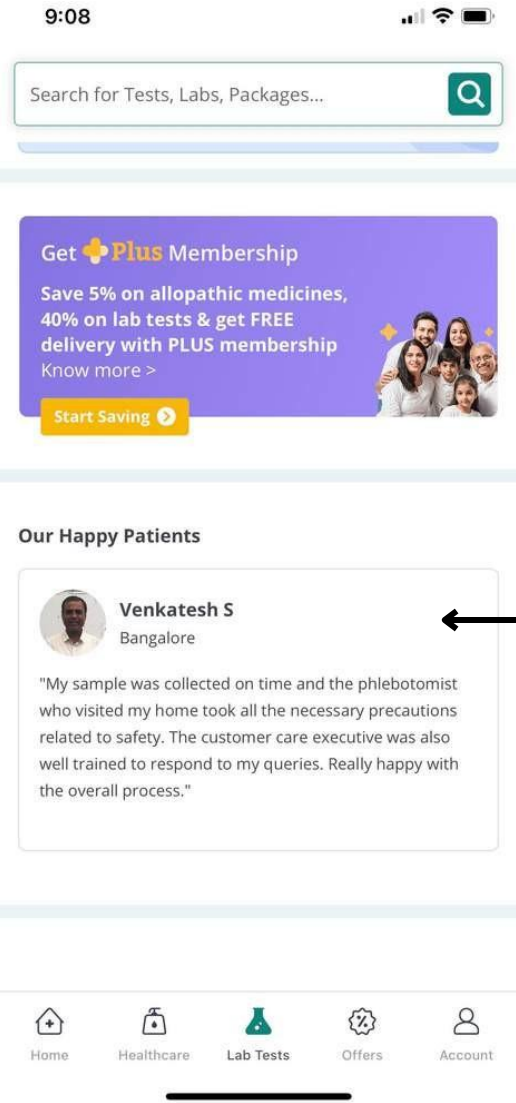

Giving the user a reason to go further with the tests and check up

FREE first sample collection, right at start

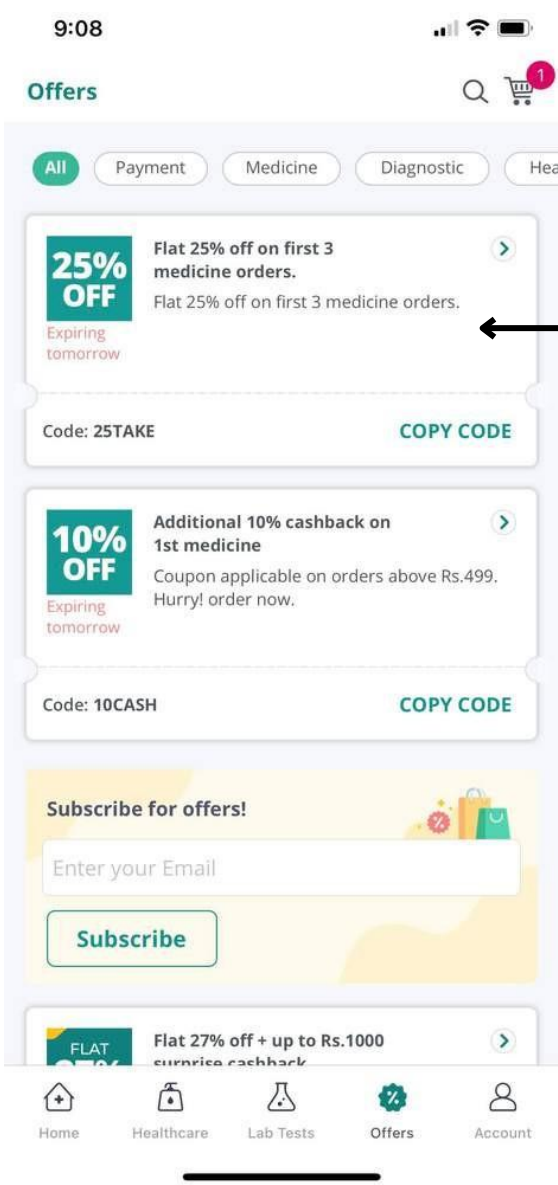

An option to call for each service, makes the user feel comfortable when lost anywhere

Providing proof of service, building trust!

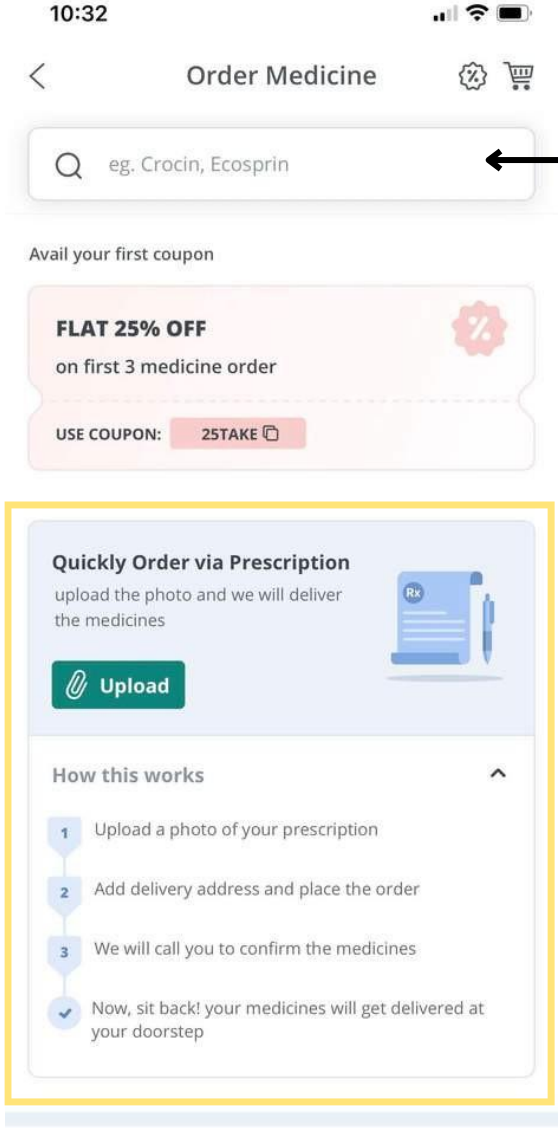

Social proof, again a good way to establish trust in service

Search for medicines

A separate tab for offers segregated by categories and expiry, a good way to present discount codes and create urgency

But, how useful is this? Doesn't it seem redundant! The payments page will anyway have applicable coupons to apply and others are also mentioned with every service

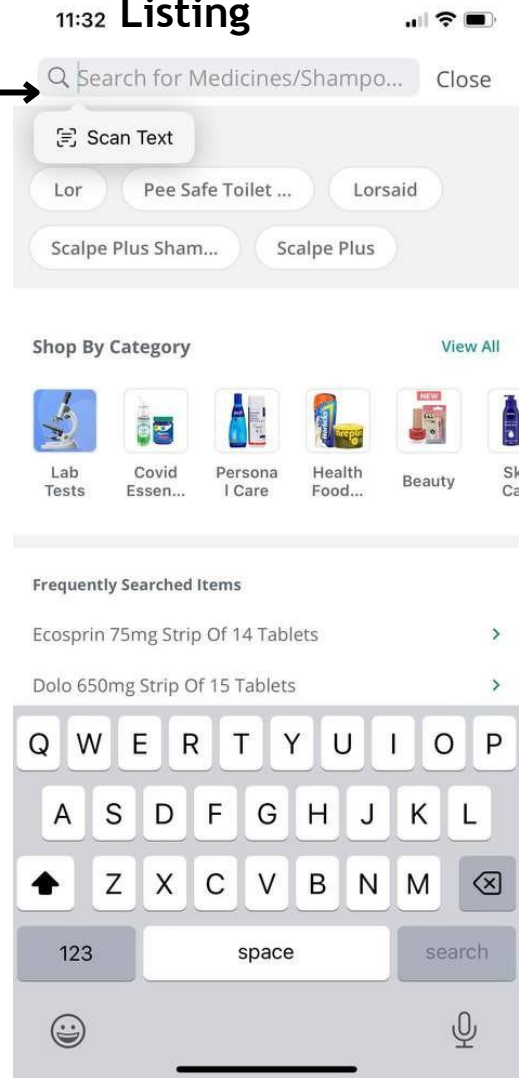

2 Ways to order medicines

Better way to order medicines at some other place

Uploading prescription covering maximum area of the page, making it seem important!

Clear steps for uploading and usage, getting the job done easily

Product Listing

Search bar seems to be enough action driven with easy access to categories and frequently searched items

The Scan text works only for one text/medicine/item at a time as is done in normal search

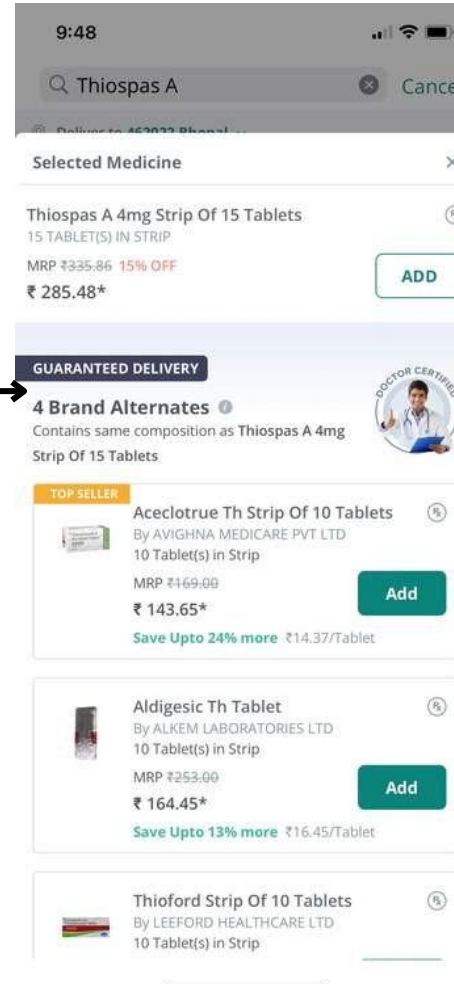

Uploading a prescription for multiple medicines purchase would be more suitable and easy here

Product Description

Assurance of the delivery!

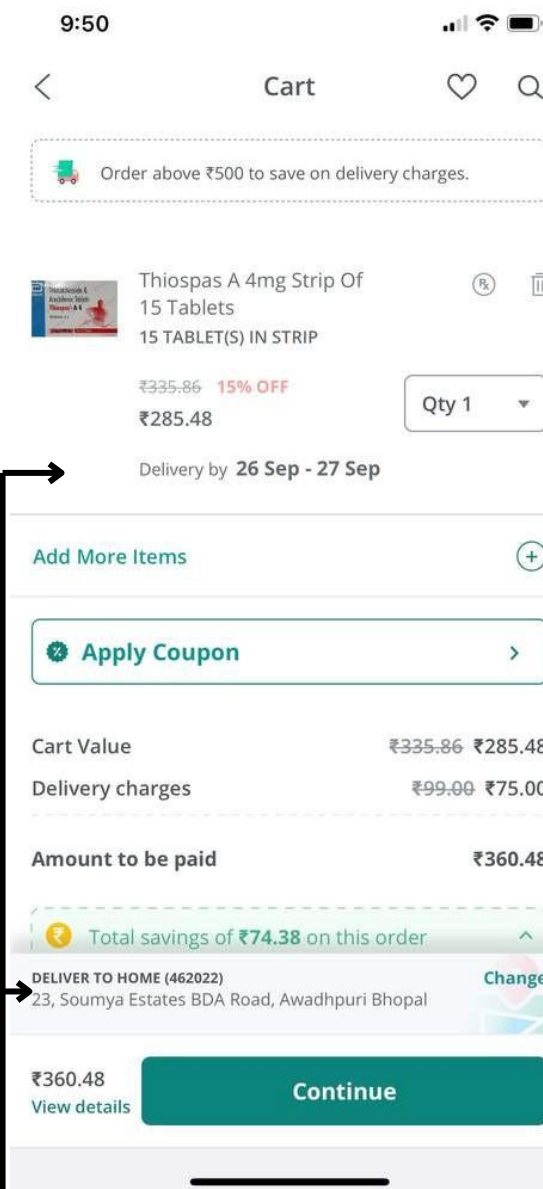

The Expiry date of the medicine seems to be missing at the front to wave off doubts while purchasing

Showing cheaper alternatives with same composition is a good listing mechanism while purchase

But, would only be beneficial if the person is well aware of which alternatives would suit better

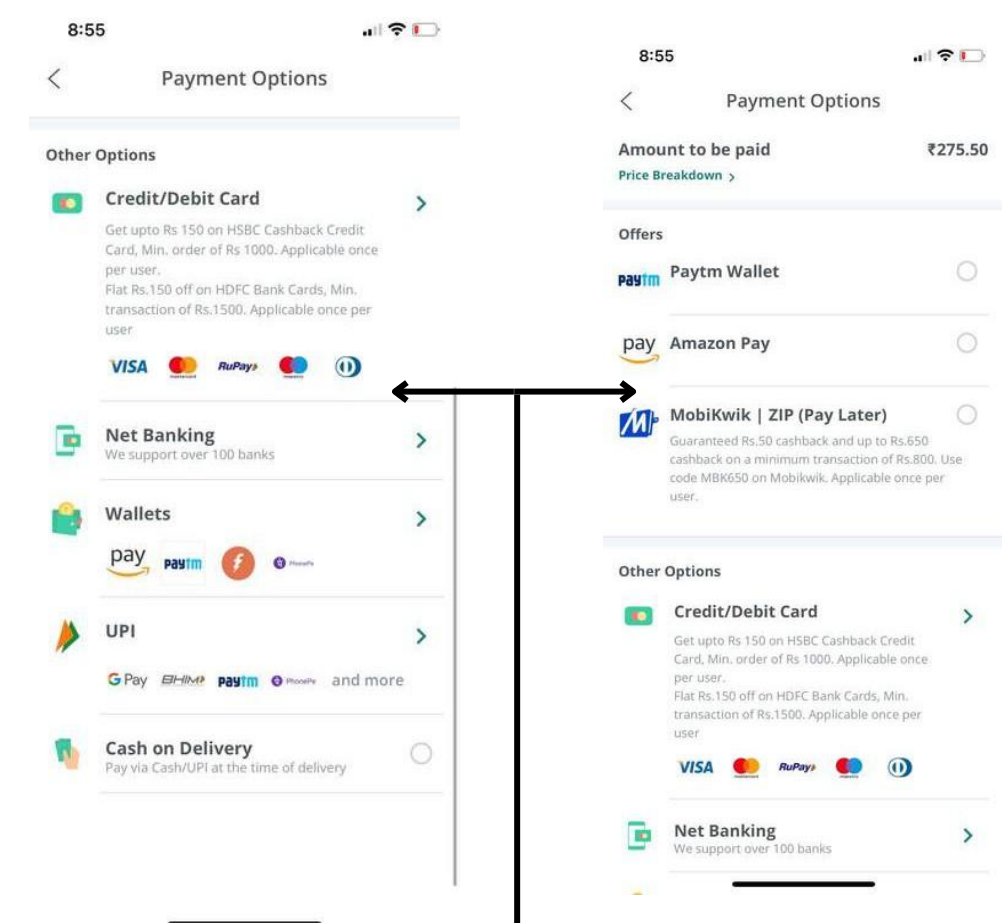

Cart

Delivery seems quick! (as seen on 25 Sept)

The address has to be manually entered even after allowing the app to detect location at the very start

Payment Page

Multiple payment options to go with

Overall Analysis

- The overall flow from landing page to discovery of product to final order, seems **easy to go** and **intuitive**.
- The recommendations on Home page has a **personal touch** with images of the popular items used in Indian household building trust and helping in easy decision making.
- The ordering flow is **not lengthy** and would probably keep the user engaged hence reducing drop offs, and hence maintaining the overall psyche of the user.
- **Offers and cashback** on each service and items prompts users to make the first purchase and making it **easier and faster** to take next steps.

Possible Improvements

- The app asks for location permission at the beginning and detects only the pincode. The address at the end is to be manually entered. Auto detecting the precise location and later on enabling an option to correct or modify it can help reduce user input.
- The offers tab can be possibly removed as offers are already made clear on each service and product page along with payments page.
- The expiry dates for some medicines seem to be missing on the Product Details tab. Mentioning that upfront can wave off doubts and lead to quick purchase.
- Adding the Buy Now option on the product page can skip the step of going to cart and lead to direct payment in case of emergency purchase thus enabling quick purchase.
- The option to replenish stock on a timely basis for some regular medicines can increase the repeat purchase. (Did not find reminders option on Accounts page, as of now)
